Intake Spec v1.2 — Gaps and Plan

Your Oracle Clinician design prototype vs. Intake Form Specification v1.2. Internal. 27 Oct 2026.
Based on the code as it is now, including the step 1 changes that aren't saved to git yet.

> **How time is counted:** this is a design prototype. There's no real backend and no real AI, and the questions are driven by data files. Most gaps mean adding questions to a data file and writing one scripted demo chat each. Times are for one person and assume we reuse the screens we already have.

✅ Done	🟡 Partly done	❌ Missing	Total time
17	**8**	**13**	**About 7 days**

🟡 Partly done

#	Gap	What's missing	Time
1	Hormone therapy (HRT)	How it's taken, for how long, did it help, why they stopped	2 h
2	Sign-up	Password needs a capital letter and a number; "How did you hear about us?"; "Already a Genesis Gold customer?"	2 h
3	Teen questions	Remove adult options like "Pregnant"; simpler intersex question	2 h
4	Older-parent chat	Exists, but isn't picked by the "who are you asking about" question	1 h
5	Chat banners	Only the older-parent banner exists	2 h
6	Consult questions	Health goal, why not reached yet, number of providers seen, anything else	3 h
7	Lifestyle	Exercise, diet, stress (1–10), support people	2 h
8	Old gender choices left over	"Complete your profile" screen, demo pages, auto-test tool	2 h

❌ Missing

#	Gap	Time
9	"Who are you asking about today?" at the start of every chat	4 h
10	Child chat (parent asking about a child), as one scripted demo	4 h
11	Partner chat (general information only), as one scripted demo	3 h
12	Warning levels that change by who the chat is about (shown in the demo chats)	4 h

13	Symptom checklist with Yes / No / N/A	5 h
14	Medical history grid (me and family)	5 h
15	Period and pregnancy history	3 h
16	Extra male questions (children, fertility, self-exam)	1 h
17	Teen form: home, school, friends, safety	4 h
18	Child form: birth, milestones, school, safety, eye/hearing/dental checks	4 h
19	Hours of sleep as a profile question	1 h
20	Choosing what goes in the provider summary	2 h
21	Editing or deleting each sensitive answer	2 h

Plan

Phase	Items	Why this order	Time
1. Who the chat is about	#9, #10, #11, #12, #4, #5	Most important: the wrong chat type means the wrong advice	**2.5 days**
2. Quick fixes	#1, #2, #3, #8	Small, easy changes that close visible gaps	**1 day**
3. Adult profile	#13, #14, #15, #16, #7, #19	Fills in the main health profile	**2 days**
4. Teen and child	#17, #18	Complete forms for younger users	**1 day**
5. Chat and privacy	#6, #20, #21	Final polish	**1 day**
Total			**About 7 days (1.5 weeks)**

Not part of this prototype

The prototype only fakes these, so they need the backend or legal teams: Stripe payments, passing the chat type to the real AI, encrypting the data, syncing new articles into the knowledge base, and legal review (teen rules, privacy laws, under-13 data).

Decisions needed first

#	Question	Default if no answer
1	Should these questions be full forms, or asked inside the chat?	Inside the chat, like today
2	Should sleep, medicines and supplements be required?	Optional (skippable)

3	Show the teen hormone questions now, or wait for the lawyer?	Hide them until the lawyer confirms
